

The News letter

PMG SI (Polimiroir Group - Steel Innovation) letter of information - July 2017

Edito

We are pleased to announce the creation of our new subsidiary PMG maintenance, at 40 km from Paris and 20 minutes from Roissy Charles de Gaulle airport.

PMG Maintenance an investment to meet your expectations

Metallization operation

New building

Our group consisted of four factories, all certified ISO 9001 ISO 14001 and had an important organization, allowing us to meet the expectations of our customers, but this structure did not allow us to respond to repair emergencies.

The vocation of our fifth plant, PMG maintenance, is to be very reactive, with the technician staff in charge of operations but also in direct relationship with the customer.

We have invested more than 400 k € in order to equip our new company with HVOF projection equipment and a process of metallic wire coatings.

Our capacity is 8 meters length for a maximum diameter of 1.2 meters.

The proximity of our mechanical factory POLIMIROIR offering turning, welding, grinding, balancing and our factory of nickel and hard chromium plating RCD will enable us to respond as quickly as possible to the expectations of our customers.

You can find the company leaflet on the following link www.pmg-si.com And all our products and company sheets on our website.
