PMG SI (Polimiroir Group - Steel Innovation) letter of information - November 2016

The business sectors such as Aeronautics, Energy and Nuclear require more and more expertise and means of control in order to follow, evaluate and improve the quality of the coatings performed by our companies.

### PMG Group's expertise, know-how and new technologies

For several years, we had been equipped with the most efficient internal control systems and we had contracts with recognized service providers enabling us to meet all the requirements related to our business.

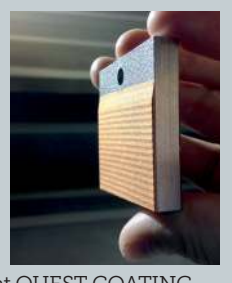

OUEST COATING Laboratory

Shot peening

Dense deposit (porosity <0.2%) of copper produced by Cold Spray at OUEST COATING

Our policy of developing and implementing new technologies has led us to strengthen our research and development activities and our laboratory.

We recruited several engineers and doctors in charge to conduct research in the fields of coatings by dry and wet processes.

We carry out this research on our premises, on the same production sites. This proximity gives us a great reactivity.

The latest technological investments made, such as the Cold Spray and the shot peening, use the skills of our laboratory to develop new surface treatments.

The companies SAFRAN, AIRBUS HELICOPTERS, GENERAL ELECTRIC, EDF, etc. have already qualified our activities of laboratory control.

Olivier PEIFFER  
President and CEO

### Our latest equipment

Implementation of grinding means in Wujiang Polimiroir

### PMG Group companies participated in exhibitions:

POWERGEN - Milano in June

K'2016 - Düsseldorf in October

SIANE - Toulouse in October

**MIDEST 2016**  
6 to 9 December 2016  
Stand 6L87  
FRANCE - Villepinte

**SEPEM**  
24 to 26 January 2017  
Stand  
FRANCE - Douai

**ICE EUROPE**  
27 to 29 March 2017  
Stand A6-662  
GERMANY - Munich

The plants of Polimiroir, RCD, Ouest Coating and Wujiang Polimiroir will remain open during the year-end period.
