

EDITO

Hello,

At the start of the year, we are once again experiencing an uncertain period, health constraints, economic uncertainties, supply disruptions, increases in the price of materials and energy, make commercial forecasts difficult.

Our group PMG Steel Industries is betting on the future by encouraging hiring, training, innovation and investment...

CNC Lathe

The group has strengthened its investment policy for several years without forgetting the modernization plan. For this, we are helped by the government through the « Recovery Plan », we have launched several programs for the automation of means of production.

Investment in progress for a new grinding machine

This planned investment for our Polimiroir plant will increase production in France. This investment is partly financed by the governments' « Recovery plan »

POLIMIROIR CNC Lathe New Grinding Machine

POLIMIROIR WUJIANG Big lathe

Big lathe

Industrial activity has increased significantly in Asia since the Covid crises. In order to be able to meet this need, we have launched an investment plan in our Chinese plant which allows us to ensure the production of large rolls, up to 2 meters in diameter.

Our company in China turns ten years old in January 2022.

For this occasion, Polimiroir Wujiang organizes a party in January to celebrate its 10th anniversary.

We would like to thank the entire Wujiang team for having worked all these years for the success of this company and that the adventure continues.

OUEST COATING Gendron grinding machine Pulling machine

Pulling machine

Our company Ouest Coating in St Nazaire has just acquired a new grinding machine « Gendron » to complete its production unit. Dimensions : 1,80m (table) by 25cm Types of parts : cylinder rods, EDF needles, etc...

Pulling machine

We are taking advantage of the recovery plan to renew our control devices, our laboratory qualified in aeronautics and energy, continues to equip itself with modern and high-performance products.

RCD Green chrome process

The « Green Chrome » project was retained by the Aeronautical Recovery plan.

This new process is a new non-polluting chrome plating solution for aeronautical parts (based on chromium III).

Test line on landing gears with our new green chrome process.

PMG MAINTENANCE Solutions to abrasion

Increase in abrasion resistance by grinding

PROCESSES AND PRODUCTS

Stellite by Auto MIG process

Deposit of cobalt base alloy hardness 39/47 HRC.

Find our technical data sheets on our website, section PMG Maintenance technical data sheets.
